THE NEXT GENERATION KARE ACCESS CONTROL SOLUTION HAS HIT THE MARKET

Memphis, Tennessee . . . January, 2019

MedixSafe, a leading manufacturer in the access control cabinet market, is pleased to introduce the KARE XL. The 36”H x 14”W x 9”D Key Access Ready Enclosure has an increased key storage capacity of 192 – 224, depending on the configuration. It’s an ideal solution for dealers and integrators to specify for security directors and end users of all kinds to safeguard - and track access to - sensitive keys. KARE XL connects to an existing access control system and features an HID or Multi Class reader that will read iClass, RFID and Mifare cards. A key override is built right into the electronic lock.

It has a Wiegand output, so KARE XL can be easily connected to any access control panel. It gives the user control over their keys by limiting access only to authorized users and also provides an audit trail of who has accessed keys and when. This next generation KARE offering was created in response to increasing customer demand for a KARE cabinet with an even greater capacity to store critical keys.

The KARE XL comes with 224 colorful key tags with large clear windows for labels. Included are 224 Key Tag Holders which can hold multiple keys or sets of keys. Each key tag snaps open, so that names and/or numbers of keys can be inserted for easy identification.

"MedixSafe is committed to delivering the very best in key control to safeguard critical contents, including keys, pharmaceuticals, guns and other sensitive items that require an access control solution," says Jim Turner, President, MedixSafe. "The KARE XL can be connected to an access control system, and users can use their own existing access control cards and software to control who has access to the cabinet."
