

Opening New Doors to Innovation, Quality and Support!

FOR IMMEDIATE RELEASE

CAMDEN INTRODUCES ITS CV-7600 SERIES BLUETOOTH-ENABLED CARD READER

May, 2020 . . . Mississauga, Ontario

Camden Door Controls, a leading provider of door activation, control and locking products, is pleased to bring to market a mobile-ready reader based on RFID technology that combines Bluetooth Low Energy (BLE) and contactless smart card technologies.

In operation, it's capable of reading data stored on a contactless smartcard credential via high frequency. In addition, it can also read data from a mobile credential stored in a smartphone's wallet app via BLE technology—without physical contact - and then pass the data obtained to the physical access control system.

CV-7600 readers are also compatible with MIFARE prox. cards and fobs. This feature allows system managers the ability to assign the best/preferred type of credential for each system user.

“The CV-7600 Bluetooth-enabled mobile readers are an ideal choice for access control system users that would prefer to use their smartphone instead of a card or fob credential,” says David Price, Vice President of Communications and Corporate Development. “We’re proud to add this Bluetooth enabled reader to our extensive line of indoor and outdoor access control system readers.”
